- Easy scan with several canned or your own created formula's
- Stock fundamental data with watchlist data display options
- Twelve pre-canned chart templates plus add your own
 - Six different chart layout options for each template
- Powerful custom date sort

My current useage

- Need to start with a good group of stocks with excellent earnings, sales, pretax margins, ROE, strong leadership in their space-CANSLIM STKs
 - IBD 50, IBD big Cap 20, IBD “Your Weekly Review” (varies from 50 to over 100 stocks-depending on the market trend) are good lists
 - Value Line 1s AND 2s,
- I electronically import good stk lists into TC2000 Stock Program
- Comparison of IBD versus VL to find more stable stocks
- I use McClellan Osc overlay to assist buying stks at discount
- I can also screen these lists with a TC2000 PCF (Personal Criteria Formula) that I wrote to identify Pocket Pivots to help timing of buying candidates
 - $V = \text{MAX}V10$ AND $C1 > C1 * 1.02$ AND $C = \text{MAX}C10$
- I use the custom date sort to analyze sector/group performance and to confirm market direction
- Use to easily monitor holdings-Has slide show mode
